Preface

This book is designed to be used by the students of medicine at the universities in Iran. The main objective of the text is to help medical students develop an ability to handle the kind of written and spoken English they will encounter during the pursuit of their academic education.

The book is intended to fulfil the requirements of a three-credit course of ESP. The students taking the course are required to have passed some general/academic English courses, being able to read and understand English texts termed as high intermediate to advanced. The book provides an opportunity for the students to develop not only their reading, but also their speaking and listening skills through the videos on medical subjects accompanying the text. The book also includes a chapter on medical terminology, which provides the students with the basic prefixes, stems and suffixes necessary for medical students to promote their knowledge of medical terminology in addition to some medical terms very common in medicine. Moreover, the pictures used in each unit are either taken from the Internet sites and referenced or designed by the authors.

The materials presented have already been piloted in real courses and have undergone several revisions and modifications. However, this is by no means to say that the book is free from defects. Readers' advice on any aspect of the book will thus be appreciated.

Table of Contents

Units	Page
Unit 1: Introduction to Human Anatomy and Physiology	1
Unit 2: Evolution: At the Core of Molecular Change	15
Unit 3: What are Hepatitis A, B, C, D, E and G	33
