Practice Test 1

Passage 1

You should spend about 20 minutes on Questions 1-15 which are based on Reading Passage 1.

NETWORKING

Networking as a concept has acquired what is in all truth an unjustified air of modernity. It is considered in the corporate world as an essential tool for the modern business person, as they trot round the globe drumming up business for themselves or a corporation. The concept is worn like a badge of distinction, and not just in the business world.

People can be divided basically into those who keep knowledge and their personal contacts to themselves, and those who are prepared to share what they know and indeed their friends with others. A person who is insecure, for example someone who finds it difficult to share information with others and who is unable to bring people, including friends, together does not make a good networker. The classic networker is someone who is strong enough within themselves to connect different people including close friends with each other. For example, a businessman or an academic may have someone who is likely to be a value contact in the future, but at be noment that person may benefit from meeting another associate or friend. It takes quite a secure person to bring these people together and allow a relationship to develop independently of himself. From the non-networker's point of view such a development may be intolerable, especially if it is happening outside their control. The unfortunate thing here is that the initiator of the contact, if he did but know it, would be the one to benefit most. And why? Because all things being equal, people move within circles and that person has the potential of being sucked into ever growing spheres of new contacts. It is said that, if you know eight people, you are in touch with everyone in the world. It does not take much common sense to realize the potential for any

kind of venture as one is able to draw on the experience of more and more people.

Unfortunately, making new contacts, business or otherwise, while it brings success, does cause problems. It enlarges the individual's world. This is in truth not altogether a bad thing, but it puts more pro sure on the networker through his lavnar to maintain an ever larger circle of people. The most convenient www.pchaps, to cull old contacts, but this would be anothema to our networker is a volud defeat the whole purpose of n cw nking. Another problem is the react, no riends and associates. Sp ear no oneself thinly gives one less time or the s who were perhaps closer to one in nast. In the workplace, this can cause nsion with jealous colleagues, and even with superiors who might be tempted to rein in a more successful inferior. Jealousy and envy can prove to be very detrimental if one is faced with a very insecure manager, as this person may seek to stifle someone's career or even block it completely. The answer here is to let one's superiors share in the glory; to throw them a few crumbs of comfort. It is called leadership from the bottom.

In the present business climate, companies and enterprises need to co-operate with each other in order to expand. As globalization grows apace, companies need to be able to span not just countries but continents. Whilst people may rail against this development, it is for the moment here to stay. Without co-operation and contacts, specialist companies will not survive for long. Computer components, for example, need to be compatible with the various machines on the market and to achieve this, firms need to work in conjunction with others. No business

or institution can afford to be an island in today's environment. In the not very distant past, it was possible for companies to go it alone, but it is now more difficult to do so.

The same applies in the academic world, where ideas have been jealously guarded. The opening-up of universities and colleges to the outside world in recent years has been of enormous benefit to industry and educational institutions. The stereotypical academic is one who moves in a rarefied atmosphere living a life of sometimes splendid isolation, a prisoner of their own genius. This sort of person does not fit easily into the mould of the modern networker. Yet even this insular world is changing. The ivory towers are being left ever more frequently as educational experts forge links with other bodies;

sometimes to stunning effect as in Silicon Valley in America and around Cambridge in England, which now has one of the most concentrated clusters of high tech companies in Europe.

It is the networkers, the wheeler-dealers, the movers and shakers, call them what you will, that carry the world along. The world of the Neanderthals was shaken between 35,000 and 40,000 BC; they were superseded by *Homo sapiens* with the very 'networking' skills that separate us from other animals: understanding, thought abstraction and culture, which are inextricably linked to planning survival and productivity in humans. It is said the meek will inherit the earth. But will they?

Questions 1-5

Do the following statements agree with the information in Reading 2 assage 1? In boxes 1-5 on your answer sheet write

YES if the statement agrees with he information if the statement continuous the information NOT GIVEN if there is no information would the statement

Example
Networking is a concept.

Answer Yes
