3-2-1 Vowels in Persian Language	123
3-2-2 Consonants	125
3-2-3 Phonotactics	129
3-2-4 Word accent	129
3-2-5 Colloquial Iranian Persian	131
3-2-6 Examples of Broad IPA Transcription	132
Chapter four: Bilingual Terminology of Language and Speech Pathology	135
References	171

Preface

Gaining good command in a major field of study is a multi-faceted task which demands perseverance and aspiration in fulfilling its requirements. When admitted to health care majors, more than skills needed, the individual is challenged by a vast terminology, which is like learning a new language. Mastering over jargons and technical terms is inevitable. Besides general terms shared by different sub-branches of medicine, each major has its own jargons. Like any other professional field, speech therapy contains such a list of technical terms and jargons. When you are new to the world of speech therapy, learning the new terminology can be overwhelming. You may always come across terms that need to be rephrased or have to be checked out online or in reference books. Many books pursuing a similar aim offer a simple breakdown of the basics. Here is a quick reference guide containing speech therapy terms, jargons, and their definitions to help you get started sorting out the terms. An attempt was made to include as many frequent terms as possible, yet it is by no means an exhaustive and all-including source.

Organization of the Material

The present book is divided into four different sections. Terminology forms the first and also the major section of the book; the second part is dedicated to frequently used acronyms, primary acquaintance with which is critical. The third section presents common terms in phonetics, needed in pathology of speech and speech therapy studies, along with IPA charts for English language, which is necessary to comprehend the available literature. Furthermore, a brief introduction to Persian phonology along with IPA charts and transcription examples are presented in this section. Finally, the last section encompasses a bilingual glossary of speech therapy and pathology terms.
