Notice

Medicine is an ever-changing science. We have been witnessing changes in diagnostic and therapeutic modalities and guidelines during last several years. The authors have used sources believe to be reliable for the use of this book. However, due to possibility of human error or changes in medicine, readers are required to confirm the information provided in this book with other sources. Readers are especially required to read all parts of the product information sheet included in the package of each drug they plan to administer and follow those instructions. Readers are also needed to follow instructions of FDA and other regulatory bodies in this regard.

Chapter 9	Minimally Invasive Ablative Therapies.....	151
Chapter 10	Follow-Up after Definitive Therapies Local vs. Distant Recurrence Management of PSA Relapse.....	162
Chapter 11	Hormone Therapy Castration Resistant Prostate Cancer.....	175

Preface

Prostate cancer is the most common non-cutaneous cancer in men and accounts for over a quarter of new cancer cases in men. Statistics show that prostate cancer is the 2nd and 3rd leading cause of cancer-related deaths in US and Canada.

There are extensive guidelines and debates regarding screening, pathology, imaging, watchful waiting, active surveillance, radical prostatectomy, radiation therapy, minimal invasive therapies as well as hormonal therapy of prostate cancer. Furthermore, there have been several advances in treatment of castration resistant prostate cancer in recent years.

The authors have tried to provide a quick reference book which covers different aspects of prostate cancer and addresses the most important controversies and modern therapeutic modalities in this regard. To make it as clear and simple as possible, different tables and figures have been used to classify and illustrate these items.
