Talking with Adults

Our incentive for preparing this book is focused on training students, teachers and directors of schools about defense and passive defense. In this book we tried to teach suitable methods while occurrence of intentional or nun-intentional dangers.

Please don't hesitate to give us your comments for promotion of the level of these types of books.

Foreword

Iran, our homeland enjoys special geographical and political characteristics that is why it has been the target of natural and artificial hazards like: Earthquake and flood, or war respectively with heavy loss of man-soul and financial resources.

In present time by the aid of integrated crises management programs and by using effective activities along with applied plans we can minimize multi purpose expenditure of programs to decrease intensity and vastness of losses and deaths.

Amongst the most important items is the passive defense as a way to solve toward decreasing riskability against different dangers by increasing workability after occurrence of danger that should be planned at different levels.
