Department of Medicine
Drexel University College of Medicine
Philadelphia, Pennsylvania

Aimee G. Adams, PharmD

Clinical Pharmacist Specialist, Ambulatory Care
Adjunct Assistant Professor
College of Pharmacy and Department of Internal Medicine
University of Kentucky HealthCare
Lexington, Kentucky

We are pleased to present the 14th edition of the *Clinician's Pocket Drug Reference*. This book is based on the drug presentation style originally used in 1983 in the *Clinician's Pocket Reference*, popularly known as the "Scut Monkey Book." Our goal is to identify the most frequently used and clinically important medications, including branded, generic, OTC, and herbal products. The book now includes over 1400 generic product listings with the true number approaching 4000 entries when specific brand names are considered.

Our unique style of presentation includes key "must-know" facts of commonly used medications, essential for both the student and practicing clinician. The inclusion of common uses of medications, rather than just the official FDA-labeled indications, is based on supporting publications and community standards of care and has been reviewed by our editors and editorial board.

Encyclopedic information can be found on many websites and is occasionally needed when unique clinical situations arise. However, resources that identify the most common and essential facts are sometimes lacking. Our goal is to provide access not only to dosing but also to these clinically significant facts and key data, whether for commonly prescribed brand-name drugs, generics, or OTC products in a pocket-sized book format. Information contained within is meant for use by healthcare professionals who are already familiar with these commonly prescribed medications. For 2016, we have added over 50 new drugs, as well as hundreds of changes in other medications based on recent FDA actions and manufacturers' updates.

Versions of this book are produced in a variety of electronic or eBook formats. Visit www.eDrugbook.com for a link to some of the electronic versions currently available. Additionally, this website has several enhanced content features, such as a comprehensive listing of "look alike-sound alike" medications that can contribute to prescribing errors and other useful information related to medication prescribing.

Nursing versions of this book (*Nurses Pocket Drug Guide*) that features a section of customized nursing interventions are available. An EMS guide based on this book (*EMS Pocket Drug Guide*) with enhanced content specifically for the field provider and emergency medical practitioner is also available. Information and links for these related publications are available on the website www.eDrugbook.com.

We express special thanks to our spouses and families for their long-term support of this book and the entire Scut Monkey Project (www.thescutmonkey.com). The Scut Monkey Project, launched in 1979 at the University of Kentucky College

of Medicine, is designed to provide new medical students and other health professional students with the basic tools needed when entering the world of hands-on patient care. Many other schools have adopted the concept of "students teaching students" over the years. A type of "boot camp," similar to our long-standing Scut Monkey Program course, is now offered to graduating medical students at many schools before they start their internships.

The contributions of the members of the editorial board, Harriet Lebowitz at McGraw-Hill, Tanya Punj and her colleagues at Cengage Publisher Services, and Barbara Devine are gratefully acknowledged. As a reader, your comments and suggestions are always welcome. Improvements to this and all our books would be impossible without the interest and continual feedback of our readers. We hope this book will help you learn some of the key elements in prescribing medications and allow you to care for your patients in the best way possible.
