Mr.Ebrahim Rezaei Babadi, Kermanshah Governor-general, 'Kermanshah is the pilot of Virtual Province.

In order to create and continuation of the economic prosperity, investment has great importance rule. Investment profitability and insuring capital return is one of the effective factors in this regard. In the meantime, the ICT is considered in sort of the most profitable sections in economy, and despite the global crisis, it is among the few fields that has been keeping its own profitability. This issue makes

it to be considered as one of the attractive sections for private sector's investors. Hence, we have attempted to define IT as one of the development axes of the province, and in this regard, Kermanshah province has started its activities as the pilot of Virtual Province in cooperation with the Supreme Council of Cyberspace (SCC).

Regarding the development of content and communication infrastructures by the government, a high appropriate field for investment and participation has been provided in cooperation with the Ministry of Communication and Technology to invest in ICT by the private sector. Therefore, with respect to the high capacities of the province in this field, Kermanshah province can be considered as the regional ICT hub in the west of the country.

Regarding the high added value of this investment and its multiple profitability compared to other sections, the private sector will be supported according to develop ICT in the province and we all hope to provide the required conditions in order to develop the province, mainly in the field of ICT.

Dr.Hedayat Hatami, Kermanshah Deputy Governor of Human Resources and Management Development ‘Bright horizon of investment in the field of IT in the province’

Today, the virtual space is changing into the real space for people, so that using it considered as one of the development indicators among the countries. Therefore, it is one of the foundations and tools to make evolution which can lead to create a competitive advantage in the fields of economy and investment.

Regarding the appropriate capacity in the field of virtual province and the intention of provincial officials, Kermanshah has been chosen as the pilot of virtual province and providing a strategic and practical plan is one of the important outcomes in this section, and recently, the operational affairs are also performing based on the prepared plan. It can be dare said that Kermanshah is the only province having a plan and model in order to realize virtualization resulted from the efforts of province's experts in this field.

With respect to the investment attraction in this field and the presence of desired conditions, it has been tries to take serious steps by informing through different media, holding specialized conferences and investment meetings on ICT, promoting the culture of investment to accompany activists of the private sector and managers in order to realize the Virtual Province. In implementing this plan, it has been tried to effect the economic development by using of various investment models such as public sector, guild investment and participation of the public and private sectors along with different supports, such as providing facilities to investors and holding specialized meetings to determine model and the form of participation in investment, so that people can acquire its welfare benefits and services.
