### PREFACE

The rapid growth of interest in technology and science along with the dire need to comprehend the books and articles on these subjects has stimulated a great multitude of people to learn a proper language as an inevitable and basic requirement.

As English is the most dominant and wide spread international language both among the scientists and scholars on one hand, and among the practitioners in the world of commerce and industry on the other hand; naturally people have been encouraged to choose this language to learn.

Now in the early years of the third millennium billions of people all over the globe are obliged to rush into language schools or use self-study books. The present book can be equally used as a good source in a language class and by those learners who want to study on their own. The book embodies various interesting passages and a bulk of related and essential grammar.

## PRONUNCIATION KEY

Consonants		νσ	wels
