The authors, editor, and publisher have made every effort to provide accurate information. However, they are not responsible for errors, omissions, or for any outcomes related to the use of the contents of this book and take no responsibility for the use of the products and procedures described. Treatments and side effects described in this book may not be applicable to all people; likewise, some people may require a dose or experience a side effect that is not described herein. Drugs and medical devices are discussed that may have limited availability controlled by the Food and Drug Administration (FDA) for use only in a research study or clinical trial. Research, clinical practice, and government regulations often change the accepted standard in this field. When consideration is being given to use of any drug in the clinical setting, the healthcare provider or reader is responsible for determining FDA status of the drug, reading the package insert, and reviewing prescribing information for the most up-to-date recommendations on dose, precautions, and contraindications, and determining the appropriate usage for the product. This is especially important in the case of drugs that are new or seldom used.

Editor's Preface

It is our belief that sexual dysfunction is a common condition affecting both men and women. Many practitioners, particularly in the disciplines of family practice, internal medicine, and urology, may have the opportunity to treat both male and female patients, sometimes even the husband and wife of a family. In such instances, sexual dysfunction may be occurring in both partners. For that reason, we decided to present information regarding the pathogenesis, diagnosis, and treatment of sexual dysfunction in men and women in the same book. The book is well supplemented with tables and timely references. Any practitioner who deals with both male and female patients with sexual problems will find this book to be useful.
