Academic Phrases for Academic Writing

Introduction

Defined in simplest terms, **research** is searching for and gathering information, usually to answer a particular question or problem. Research projects of various types and complexity are an integral part of the college experience and offer you the opportunity to learn a valuable set of skills. In fact, the ability to locate and evaluate information - which is the essence of research and a valuable skill in many areas of life - is a large part of what it means to be an educated person. Regardless of the type of research, the researcher needs to report the result of his/her research to the specialists in the field. To achieve this purpose, the researcher should use academic language to communicate with the experts in the field. This book is intended to help researchers in finding proper academic phrases and structures for their writing projects. Please note that this book does not seek to teach the process of an academic research.
