Series editors' preface

This series provides a comprehensive guide to a number of key areas in the field of applied linguistics. Applied linguistics is a rich, vibrant, diverse and essentially interdisciplinary field. It is now more important than ever that books in the field provide up-to-date maps of ever-changing territory.

The books in this series are designed to give key insights into core areas. The design of the books ensures, through key readings, that/the history and development of a subject is recognized while, through key questions and tasks, integrating understandings of the topics, concepts and practices that make up its essentially interdisciplinary fabric. The pedagogic structure of each book ensures that readers are given opportunities to think, discuss, engage in tasks, draw on their own experience, reflect, research and to read and critically re-read key documents.

Each book has three main sections, each made up of approximately ten units:

A: An Introduction section: in which the key terms and concepts are introduced, including introductory activities and reflective tasks, designed to establish key understandings, terminology, techniques of analysis and the skills appropriate to the theme and the discipline.

B: An Extension section: in which selected core readings are introduced (usually edited from the original) from existing books and articles, together with annotations and commentary, where appropriate. Each reading is introduced, annotated and commented on in the context of the whole book, and research/follow-up questions and tasks are added to enable fuller understanding of both theory and practice. In some cases, readings are short and synoptic and incorporated within a more general exposition.

C: An Exploration section: in which further samples and illustrative materials are provided with an emphasis, where appropriate, on more open-ended, student-centred activities and tasks, designed to support readers and users in undertaking their own locally relevant research projects. Tasks are designed for work in group's or for individuals working on their own.

The books also contain a glossary or glossarial index and a detailed, thematically organized A-Z guide to the main terms used in the book, which lays the ground for

further work in the discipline. There are also annotated guides to further reading and extensive bibliographies.

The target audience for the series is upper undergraduates and postgraduates on language, applied linguistics and communication studies programmes as well as teachers and researchers in professional development and distance learning programmes. High-quality applied research resources are also much needed for teachers of EFL/ESL and foreign language students at higher education colleges and universities worldwide. The books in the Routledge Applied Linguistics series are aimed at the individual reader, the student in a group and at teachers building courses and seminar programmes.

We hope that the books in this series meet these needs and continue to provide support over many years.

The Editors

Professor Christopher N. Candlin and Professor Ronald Carter are the series editors. Both have extensive experience of publishing titles in the fields relevant to this series. Between them they have written and edited over one hundred books and two hundred academic papers in the broad field of applied linguistics. Chris Candlin was president of AILA (International Association for Applied Linguistics) from 1997 to 2003 and Ron Carter is Chair of BAAL (British Association for Applied Linguistics) from 2003 to 2005.

LANGUAGE TESTING AND ASSESSMENT

Routledge Applied Linguistics is a series of comprehensive resource books, providing students and researchers with the support they need for advanced study in the core areas of English language and Applied Linguistics.

Each book in the series guides readers through three main sections, enabling the to explore and develop major themes within the discipline.

- Section A, Introduction, establishes the key terms and concepts and extends readers' techniques of analysis through practical application.
- Section B, Extension, brings together influential articles, sets them in context and discusses their contribution to the field.
- · Section C, Exploration, builds on knowledge gained in the first two sections,
- setting thoughtful tasks around further illustrative material. This enables readers to engage more actively with the subject material and encourages them to develop their own research responses.

Throughout the book, topics are revisited, extended, intervoven and deconstructed, with the reader's understanding strengthened by tasks, and follow-up questions.

Language Testing and Assessment.

- provides an innovative and thorough review of a wide variety of issues from practical details of test development to matters of controversy and ethical practice
- investigates the importance of the philosophy of pragmatism in assessment, and coins the term effect-driven testing
- explores test development, daya analysis, validity and their relation to test effects
- illustrates its thematic brendth in a series of exercises and tasks, such as analysis of test results, study of test revision and change, design of arguments for test validation and exploration of influences on test creation
- presents influential and seminal readings in testing and assessment by names such as Michael Canale and Merrill Swain, Michael Kane, Alan Davies, Lee Cronbach and Paul Meehl and Pamela Moss.

Written by experienced teachers and researchers in the field, Language Testing and Assessment is an essential resource for students and researchers of Applied Linguistics.

Glenn Fulcher is Senior Lecturer in the School of Education at the University of Leicester, UK.

Fred Davidson is Associate Professor in the Division of English as an International Language at the University of Illinois at Urbana-Champaign, USA.

ROUTLEDGE APPLIED LINGUISTICS

SERIES EDITORS

Christopher N. Candlin is Senior Research Professor in the Department of Linguistics at Macquarie University, Australia, and Professor of Applied Linguistics at the Open University, UK. At Macquarie, he has been Chair of the Department of Linguistics; he established and was Executive Director of the National Centre for English Language Teaching and Research (NCELTR) and foundational Director of the Centre for Language in Social Life (CLSL). He has written or edited over 150 publications and coedits the Journal of Applied Linguistics. From 1996 to 2002 he was President of the International Association of Applied Linguistics (AlLA). He has acted as a consultant in more than thirty-five countries and as external faculty assessor in thirty-six universities worldwide.

Ronald Carter is Professor of Modern English Language in the School of English Studies at the University of Nottingham. He has published extensively in applied linguistics, literary studies and language in education, and has written or edited over forty books and a hundred articles in these fields. He has given consultancies in the field of English language education, mainly in conjunction with the British Council, in over thirty countries worldwide, and is editor of the Routledge Interface series and advisory editor to the Routledge English Language Introduction series. He was recently elected a fellow of the British Academy of Social Sciences and is currently UK Government Advisor for ESOL and Chair of the British Association of Applied Linguistics (BAL).

TITLES IN THE SERIES

Intercultural Communication: An advanced resource book Adrian Holliday, Martin Hyde and John Kullman

Translation: An advanced resource book Basil Hatim and Jeremy Munday

Grammar and Context: An advanced resource book Ann Hewings and Martin Hewings

Second Language Acquisition: An advanced resource book Kees to Bot, Wander Lowie and Marjolijn Verspoor

Co. pus-based Language Studies: An advanced resource book Anthony McEnery, Richard Xiao and Yukio Tono

Language and Gender: An advanced resource book Jane Sunderland

English for Academic Purposes: An advanced resource book Ken Hyland

Language Testing and Assessment: An advanced resource book Glenn Fulcher and Fred Davidson

Acknowledgments

We would like to thank the series editors, Chris Candlin and Ron Carter, for the timely feedback on drafts of this manuscript, and their constant encouragement and help. At every stage in the writing process their wisdom and insight have been an inspiration, and we could not have asked for better editors with whom to work. At Routledge we would also like to thank Louisa Semlyen and Nacia Semunyal for their help, advice and efficiency.

The picture of the Golden Gate Bridge in Unit A4 is taken from http://www.sonic.net/~playland/ggsag.html. This picture is by an unknown photographer and is copyright-free, but we wish to acknowledge the source.

The examples of rapid prototyping in manufacturing in Unit A6 are reproduced by kind permission of Laser Prototypes Europe Ltd. The authors wish to thank Mr Tom Walls for his cooperation and advice while writing this part of Unit A6 (Tom@laserproto.com).

We would like to thank Mr R. J. Hann, estwhile Staff Sergeant of Delta Company Fourth Battalion (4 RAR/NZ (ANZAC)), for permission to publish the picture in Unit C3, taken circa 1970 and published at http://www.diggerhistory.info/pages-uniforms/slouch_hat-b.htm.

The PERT and Gantt Charts used in Unit C6 are reproduced with permission of Alan Levine of Maricopa Community College.

How to use this book

Testing and assessment are part of modern life. Schoolchildren around the world are constantly assessed, whether to monitor their educational progress, or for governments to evaluate the quality of school systems. Adults are tested to see it they are suitable for a job they have applied for, or if they have the skills necessary for promotion. Entrance to educational establishments, to professions and ven to entire countries is sometimes controlled by tests. Tests play a fundamental and controversial role in allowing access to the limited resources and opportunities that our world provides. The importance of understanding what we est how we test and the impact that the use of tests has on individuals and so cieties cannot be overstated. Testing is more than a technical activity; it is also an ethical enterprise.

The practice of language testing draws upon, and also contributes to, all disciplines within applied linguistics. However, there is so nething fundamentally different about language testing. Language testing is all about building better tests, researching how to build better tests and, in so doing, understanding better the things that we test.

Sociolinguists do not create 'sociolinguistic things'. Discourse analysts do not create discourses. Phonologists do not create spoken utterances. Language testing, in contrast, is about doing. It is about creating tests.

In a sense, therefore, each section of this book is about the practical aspects of doing and of creating. And so each section has a research implication; no section is concerned purely with exposition. Research ideas may be made explicit in the third section, Exploration but they are implicit throughout the book; put another way, the creative drive of language testing makes it a research enterprise, we think, at all times.

In the text we do not merely reflect the state of the art in language testing and assessment; nor do we simply introduce existing research. Our discussion is set within a new approach that we believe brings together testing practice, theory, ethics and philosophy. At the heart of our new approach is the concept of effect-driven testing. This is a view of test validity that is highly pragmatic. Our emphasis is on the outcome of testing activities. Our concern with test effect informs the order and structure of chapters, and it defines our approach to test design and development.

As test design and development is about *doing, creating* and *researching*, we have taken special care over the activities. With Dewey, we believe that through *doing* we grow as language testers, as applied linguists and as language teachers.

The book is divided into three sections. A: Introduction consists of ten units dealing with the central concepts of language testing and assessment. It contains activities for you to carry out alone, or with others if you are studying this book as part of a course. B: Extension provides extracts from articles or books relating to language testing and assessment which give you further insights into the concepts introduced in Section A. Each extract in B: Extension is accompanied by a divities to focus your reading and help you to evaluate critically what you have read and understand how it links to a wider discussion of language testing and assessment. C: Exploration builds on the material you will already have found in the book. In this section we provide extended activities that help you to work through practical and theoretical problems that have been posed in the other sections. We also present ideas for individual and group project work, as well as suggestions for research projects.

The organization of this book allows you to concentrate on particular themes, such as classroom assessment or writing items and tasks, by reading the relevant units from A: Introduction, B: Extension and C: Exploration consecutively. Alternatively, you may wish to read the whole of A: Introduction before embarking on Sections B and C. In fact, you may decide to read the Sections in any sequence, just as you would read Julio Cortázar's novel Hopscotch: there is no one right place to start, and each path through the text provides a different experience. Whichever choice you make, the book is extensively cross-referenced and carefully indexed so that you can easily find your way around the material.

At the end of the book we provide a glossary of key terms that are not explained within the text itself. If you come across a term about which you feel uncertain, simply turn to the glossary for an explanation. We also provide an extensive list of references for additional reading.

In addition to the book itself, there is also a website http://www.routledge.com/textbooks/07/0415339476 in which we provide very extensive additional reading, activities, links to relevant websites and further ideas for projects that you might like to indertake on your own or with colleagues.
